

Discovery Call Prep — Chris-Marine AB

Website update project · call preparation notes

Company context

Chris-Marine AB is an established international B2B industrial company (marine diesel engine maintenance & monitoring equipment), with offices in Sweden, Denmark, Germany, Singapore, China, India, Ecuador and the USA, and clients including Maersk, Wärtsilä, MAN, BP, Chevron and Royal Caribbean. Their current site runs on WordPress + WooCommerce, with a full product catalog, a service booking system, and a data platform called **Trust-Ocean** for ship performance monitoring.

What this means going in

This is a real, established company — not a small local business. Budget is likely reasonable if scoped properly. They may involve more than one decision-maker and could expect a more formal process (proposal, possibly a contract). Their existing data platform (Trust-Ocean) is a long-term opening for AI work later — worth noting, not pitching today.

How to open the call

“Thanks for taking the time. Before I put anything together, I want to make sure I really understand what’s not working for you right now and what you’re hoping the new site does for the business — can you walk me through what prompted this?”

1. Scope — refresh or full rebuild

Is the goal to redesign and improve what’s there, or are you open to rebuilding it from scratch on a different platform?

Why ask this: This is the single biggest factor in your price and timeline. A WordPress content/visual refresh might be days to a couple weeks of work. A full custom rebuild is a much larger project. Don't quote anything until you know which one this is.

Are there specific things about the current site that frustrate you or your team day-to-day?

Why ask this: Specific, concrete complaints (slow, hard to update, outdated design, broken forms) tell you exactly what to fix and what to emphasize in your proposal — much more useful than a vague 'make it better.'

Is your product catalog and service booking system something you want to keep as-is, or does that need work too?

Why ask this: These are functional systems, not just content pages. If they need rebuilding too, that's significantly more scope than a visual refresh alone — ask this explicitly so it doesn't get missed.

2. Who's actually involved

Who else is involved in this decision besides you — marketing, IT, leadership?

Why ask this: Larger companies often have more than one stakeholder. Knowing this upfront avoids a proposal getting stuck in internal review you didn't see coming, and tells you who else might need convincing.

Who currently manages content on the site day-to-day?

Why ask this: This tells you whether they need a simple, easy-to-edit CMS for non-technical staff, or whether a more technical team can handle a more complex setup. It directly shapes what platform makes sense.

3. Real goals behind the request

Is this more about how the site looks and feels, or are there specific functional problems — like leads not converting, or the site being hard to update?

Why ask this: People often say 'update the website' when the real issue is something specific underneath (poor lead capture, confusing navigation, etc). Finding the real problem lets you propose a solution that actually solves it, not just a fresh coat of paint.

You have offices across a lot of countries — is multi-language support something you need, or is English enough?

Why ask this: Multi-language support materially affects both cost and technical approach. Given their global footprint, this is worth asking directly rather than assuming.

4. Budget and timeline

Do you have a budget range in mind for this, even roughly?

Why ask this: Many clients won't volunteer a number unless asked directly. Even 'we haven't decided yet' is useful — it tells you to lead with a clear, tiered proposal instead of guessing at what they'll accept.

Is there a deadline driving this — an event, a rebrand, anything time-sensitive?

Why ask this: Urgency affects pricing (rushed work often costs more) and tells you how to sequence this against your other commitments, like the accounting AI negotiation.

How to close the call

"This is really helpful. Let me put together a proper proposal based on everything you've told me — I'll have that to you within 2–3 days. Does that work?"

Don't quote a price live on the call. Taking time to send a written proposal makes you look organized and considered, not unsure of yourself.

Keep in mind (don't necessarily ask aloud)

- If they mention their engine data, Trust-Ocean, analytics, or wanting the site to feel more 'modern' or 'data-driven' — that's a natural future opening to mention Enavio also does AI engineering work. Don't force it into this call; just notice it for later.

- If they seem unsure of budget, don't push. Build a proposal with 2–3 tiers (e.g. content refresh vs. full redesign) so they can self-select instead of you guessing wrong.
